S.	Prime factors of a positive integer are the prime numbers that divide that integer exactly.)
13BR2?	Given an array arr of n integers and a positive integer num.	
	Let's suppose prime factorization of num is: $p^a \times q^b \times r^c \times \times z^f$, where p,q,rz are prime numbers.	3R23CD
13c0°	Sum of numbers in array arr at indices of prime factors of number num is: a $x arr[p] + b x arr[q] + c x arr[r] + + f x arr[z]$.	
230	You are given an array arr of size n and a positive integer num. You are required to calculate the sum of numbers in arr as mentioned above, and print the same.	-,0097
30	Note:	
309738	 If arr is empty, print -1. If prime factor of num not found as indices, print 0. 	BRIT
_ c [†]	Input Format:	\
BRIST	The input consists of three lines:	-0
297	 The first line contains an integer, i.e. n. The second line contains an array arr of length of n. The third line contains an integer num 	2300
3000	The input will be read from the STDIN by the candidates.	38
	Output Format:	2091
3BR	Print the sum that was mentioned in the problem statement.	
	Example:	2230
	Input:	3 ⁶
	6	
	11 21 32 45 1 23	38309
	6	%5 ⁻
	Output:	22
	77	Story.
